# AFS60: Absolute Encoder Singletturn, SSI

# AFM60: Absolute Encoder Multiturn, SSI

**Resolution up to 18 bits**

Absolute Encoder Singletturn

**Resolution up to 30 bits**

Absolute Encoder Multiturn

**W**ith a 30-bit resolution and an extremely robust construction, the new AFM60 Absolute Encoder Multiturn sets a new benchmark. Even its small brother, the AFS60 Absolute Encoder Singletturn, is impressive, with its high resolution of 18 bits. Consequently, both new product ranges are particularly suitable for harsh operating conditions in all industrial applications where high levels of accuracy and reliability are paramount.

With a maximum singletturn resolution of 18 bits, the AFM60 is among the highest performing encoders in its market segment.

With the addition of a 12-bit multiturn resolution, the encoder reaches a class leading resolution totalling 30 bits.

Thanks to the 30 mm separation of the shaft bearings, the AFM/AFS60 product range offers users a substantially more robust solution than encoders with more conventional bearing arrangements. Even at maximum operating speeds, the increased bearing separation leads to exceptionally smooth operation as well as optimum runout. Despite the large bearing separation, the AFS/AFM60 product ranges have an extremely compact construction enabling use in applications with very limited space.

Both the AFM60 and the AFS60 can be programmed using the same programming tool as used with the DFS60 series of incremental encoders from SICK STEGMANN. For the very first time, incremental, singletturn Absolute and multiturn Absolute encoders can be parametrised using just one universal programming tool.

## Product options:

Face mount flange and servo flange, blind hollow shaft and through hollow shaft for singletturn versions  
M12 or M23 Connector outlet  
1.5 m, 3 m or 5 m cable outlet, radial or axial  
Resolution: Singletturn 18 bits max. Multiturn 12 bits

### Allocation cable outlet, cable 8-core

Colour of wires	Signal	Explanation
Brown	Data -	Interface signals
White	Data +	Interface signals
Black	cw/ccw	Counting sequence when turning
Pink	SET	Electronic adjustment
Yellow	Clock +	Interface signals
Lilac	Clock -	Interface signals
Blue	GND	Earth connection
Red	+ Us	Supply voltage

#### CW/CCW Forward/reverse:

This input programs the counting direction of the encoder. If not connected, this input is "HIGH". If the encoder shaft, as viewed on the drive shaft, rotates in the clockwise direction, it counts in an increasing sequence. If it should count upwards when the shaft rotates in the anti-clockwise direction, this connection must be connected permanently to "LOW" level (zero volts).

SET This input activates the electronic zero set. When the SET line is connected to Us for more than 100 ms, the current mechanical position is assigned the value 0 or the pre-programmed SET-value.

**Programming Tool for AFS60/AFM60 and Incremental Encoder DFS60****Programming Tool**

Type	Part no.
PGT-08-S	1036616

For programming SICK STEGMANN Absolute Encoders with M12 or M23 connectors the following adapter cables are appropriate:

**Adapter cable for PGT-08-S and AFS/AFM60 Absolute encoders. Consists of male 9-pin connector and M12 8-pin inline cable connector, pre-assembled using 8-core cable, 4 x 2 x 0.08 mm<sup>2</sup>, screened**

Type	Part no.
DSL-2D08-G0M5AC2	2048439

**Adapter cable for PGT-08-S and AFS/AFM60 Absolute encoders. Consists of male 9-pin SUB-D connector and M23 12-pin inline cable connector, pre-assembled using 8-core cable, 4 x 2 x 0.08 mm<sup>2</sup>, screened**

Type	Part no.
DSL-3D08-G0M5AC2	2048440

**Caution:** Attempting to programme an AFS/AFM60 Absolute encoder with the adapter cables intended for use with the DFS60 incremental encoder will cause damage to the Absolute encoder. Please ensure the correct adapter cable is used!
